The Intel Unite® solution +
Intel® Endpoint Management Assistant (Intel® EMA)

intel.

Seamless remote device management for smoother employee collaboration

The Intel Unite® solution is a fast, easy, cost-efficient way for businesses to help their workforce collaborate more effectively everywhere work happens. Intel® EMA enables organizations with Intel vPro® platform devices to more securely manage workplace collaboration and content sharing over the cloud. By working together, these solutions enable IT to help employees get more out of their meeting time.

How the Intel Unite® solution and Intel® EMA work better together

Intuitive, user-friendly interface for amazing, fast productivity

Dependable and easy content sharing over more secure connections

Easy device management for fewer interruptions to end users

Support for multiple devices and operating systems

Intel® EMA
A feature of the Intel vPro® platform

Intel® EMA (via Intel® Active Management Technology)* enables IT teams to remotely and securely manage devices over the cloud through device-level telemetry — regardless of the device's location. This remote connection helps IT streamline device management activities, like device updates, troubleshooting, recovery, and vulnerability remediation with minimal end user disruption.

Intel Unite®
A future of flexible collaboration

The Intel Unite® solution allows employees to turn their meeting room or home office into a connected, intelligent collaboration space. Each standalone Intel Unite® hub device can be managed remotely, and comes with lightweight, wireless content sharing software that makes seamless, secure collaboration available wherever today's workforce needs it.

Future-proof your business and support today's evolving collaboration environment.
